

Put a **FREEZE** on Winter Fires

Home fires occur more in winter than in any other season. As you stay cozy and warm this winter, be fire smart!

Half of all home heating fires occur in December, January and February.

Heating equipment is involved in **1 in every 6** home fires and **1 in every 5** home fire deaths.

Keep anything that can burn **at least 3 feet** from any heat source like fireplaces, wood stoves, radiators or space heaters.

Keep portable generators **outside, away from windows, and as far away** from your home as possible.

Install and test carbon monoxide alarms **at least once a month**.

Plug only **1 heat-producing appliance** (like a space heater) into an electrical outlet at a time.

Have a qualified professional clean and inspect your chimney and vents **every year**.

Store cooled ashes in a tightly covered metal container, and keep it **outside at least 10 feet** from your home and any nearby buildings.
